# PyroUSB

USB Configurable Infrared Temperature Sensors with 4-20 mA Output

- Temperature ranges from -40°C to 2000°C
- 2-wire 4-20 mA output
- Fully configurable via USB using Modbus protocol
- Cable and software included
- Specialised models for measuring metals, high- temperature objects or glass surfaces
- General-purpose models for most other applications
- Peak and valley hold mode allows easy measurement of objects on conveyors
- Stainless steel housing, sealed to IP65
- Quick and easy installation

CONNECTIONS

The sensor will operate with either the 4 to 20 mA cable connected, the USB cable connected, or both.

PyroUSB Series infrared pyrometers measure temperatures from -40°C to 2000°C accurately and consistently, with an outstanding response time of 200 ms. The 4 to 20 mA output is compatible with almost any indicator, controller, recorder or data logger. without the need for special interfacing or signal conditioning.

A choice of measurement wavelengths is available to suit a range of applications.

General-purpose PUA8 (8-14 μm) models can measure from -40°C to 1000°C. They are suitable for measuring high-emissivity materials such as paper, thick plastics, food, pharmaceuticals, rubber, asphalt and painted surfaces.   These models are capable of measuring very low temperatures, so they are ideal for sub-zero measurements in the food, logistics and storage industries.

Short-wavelength PUA2 (2.2 μm) models have a choice of temperature ranges from 45°C to 2000°C. They provide a more accurate reading when measuring low-emissivity materials such as many reflective metals. They are also capable of measuring through glass viewports.

Glass PUA5 (5 μm) models have a choice of temperature ranges from 50°C to 1650°C. They are filtered at a wavelength where glass is least reflective, making them an ideal pyrometer for glass surface temperature measurement.

All models have USB communications. A USB cable is included and free software is available to download from the Calex website.

Data is transmitted via Modbus, so it is also easy to configure and read temperatures from the sensor using third-party software.

The USB cable has an IP65 connector at the sensor end, and an IP65 cap protects the sensor when the USB cable is not connected.

Note: The sensor must be grounded at only one point, either the cable shield or the sensor housing.

SOFTWARE

The sensor can be configured using the included USB cable and free Windows software, CalexConfig. It is also possible to take temperature readings, see temperature charts and log data via USB in real time.

CalexConfig is available to download free of charge at www.calex.co.uk/software.

CALEXCONFIG FEATURES

Simple, touch-friendly software for one sensor.

- Temperature display (°C or °F)
- Scrolling temperature chart
- Data logging to comma-separated text file, Excel-compatible
- PyroUSB sensor configuration:
  - Emissivity setting
  - Averaging
  - Peak/valley hold processing
  - Reflected energy compensation
  - 4-20 mA output temperature scale

THIRD-PARTY SOFTWARE

The PyroUSB can also be used with third-party Modbus software.

Modbus protocol information is provided in the Operator's Guide, available to download at www.calex.co.uk and supplied with each sensor.

OPTICS

Diameter of target spot measured versus distance from sensing head (90% energy)

Note: The sensor will measure longer distances than shown, with a larger measured spot size.
